

Bitdefender GravityZone Patch Management

Patch Operating System and Applications

Unpatched systems leave organizations susceptible to malware incidents, outbreaks, and data breaches. GravityZone Patch Management module enables organizations to keep OS and Applications up to date across the entire Windows install base - workstations, physical servers and virtual servers.

Flexible and Simplified Patch Management Workflows

GravityZone Patch Management module supports both automatic and manual patching. It gives organization greater flexibility and efficiency for patch management, with the ability to create a patch inventory, schedule patch scanning, limit automatic patching to admin-preferred applications, vary scheduling for security and non-security patches and postpone reboots for patching requiring a restart.

Reduce risks against advanced attacks and achieve compliance

In the current cybersecurity landscape, patching OS and Applications has become a high priority for the IT team for both security and compliance. GravityZone Patch Management allows verification of patching enterprise-wide to comply with policies and regulations.

The screenshot displays the Bitdefender GravityZone Patch Management interface. On the left is a sidebar menu with categories like Network, Patch Inventory, Application Inventory, Packages, Tasks, Policies, Reports, Quarantine, Accounts, User Activity, Configuration, Update, and License. The main area shows a table of patches with columns for Patch Name, CVE, Patch severity, Category, Bulletin ID, Installed / Pending in..., Missing / Installation F..., and Affected Products. The table lists various patches such as 7z1604n.msi, access2013-4b2752093-fulfile-x86-glb.exe, and AcrobatDC1500720033_MUI.exe.

Bridging the Great Divide Between IT Security and IT Operations

GravityZone is now a single unified Endpoint Security platform, not only for protecting your endpoints from advanced attacks but also for incident response and patch management. Integration, simplicity, and ease of management will enable IT security and operational personnel to focus and work more efficiently.

Patch Management available as add-on for customers

Patch Management module can be added on top of existing Bitdefender GravityZone Endpoint Security products. The new module is managed from the same GravityZone console that customers use today.

Key features

- Patching for OS and the largest collection of software applications
- Automatic and manual patching
- Detailed information centering patches - CVE, Bulletin ID, Patch Severity, Patch Category
- Ability to set different schedules for security and non-security patches
- Quick deployment of missing patches
- The ability to distribute patches from the relay, reducing network traffic
- Patch specific reports that help companies demonstrate compliance
- Automatically notify IT administrator when security/non-security patches are missing

Bitdefender GravityZone Patch Management Requirements

The Patch Management Module is available for GravityZone on-premises deployment.

Patch Management module is compatible with all Microsoft Windows Desktop and Server operating systems supported by the endpoint protection products, starting with Windows 7 and Windows Server 2008 R2. Please check system requirements for endpoint security products.

Bitdefender is a global security technology company that provides cutting edge end-to-end cyber security solutions and advanced threat protection to more than 500 million users in more than 150 countries. Since 2001, Bitdefender has consistently produced award-winning business and consumer security technology, and is a provider of choice in both hybrid infrastructure security and endpoint protection. Through R&D, alliances and partnerships, Bitdefender is trusted to be ahead and deliver robust security you can rely on. More information is available at <http://www.bitdefender.com>.
